

GBUK Banana Orbit

An innovative solution to manual handling techniques used for “into and out of” prone positioning of patients for spinal surgeries which helps provide confidence, peace of mind and consistency to clinicians and operating room staff.

Why use GBUK Banana Orbit?

- **Staff & patient injury**
It may mitigate the incidence of staff and patient injury through the provision of a world-class duty of care in “into and out of” proning of patients
- **Absenteeism & insurance claims**
Hospital staff have some of the highest incidence of lower back problems¹ resulting in frequent sick leave². In addition, both staff and patient injuries may lead to costly insurance claims
- **Benefits to theatre workflow**
Offers potential time savings, adheres to compliance, assists in consistency, and provides staff confidence and peace of mind when repositioning patients for spinal surgeries
